

Results

- In the past 10 years, USAID has helped save the lives of more than 5 million children and 200,000 women.
- In 2018 alone, USAID helped 81 million women and children access essential—often life-saving—health services.
- Since 2012:
 - 12 million women gave birth in a health facility and 9.3 million newborns were reached with care after delivery.
 - 85.2 million treatments were provided to children for diarrhea and pneumonia.
 - 41.1 million children were vaccinated against deadly preventable diseases.
 - 14.9 million people gaining access to basic drinking water services.

Funding

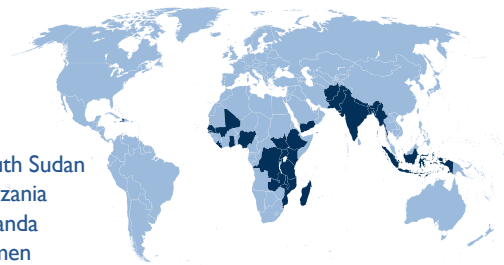

- Gavi
- Polio
- Water & Sanitation
- Balance for Non Earmarked Programs

This funding represents that of the the Global Health Programs (GHP-USAID) maternal and child health sector.

USAID
FROM THE AMERICAN PEOPLE

USAID's Investments Save the Lives of Women and Children

USAID's maternal and child health investments seek to ensure that all women and children have the same chance of a healthy life, with a focus on respectful and quality care during delivery and increasing access to basic, life-saving services for newborns and children.

USAID works with the public, private and faith-based sectors to improve access to quality health services for women and children. Programs vary by country, but examples of our investments include:

In the Community via a community health worker

- Educate women on healthy behaviors during pregnancy, the importance of delivering in a facility, and immediate and exclusive breastfeeding
- Diagnose and treat children for deadly diseases like pneumonia and diarrhea, referring to a health facility when needed
- Encourage healthy behaviors for water, sanitation and hygiene—including hand washing and use of a latrine

At the Primary Health Center with a trained service provider

- Deliver high-quality pregnancy care and early identification of complications for mom and baby
- Vaccinate children to protect families and communities from deadly diseases
- Partner with community leaders, local governments and private sector organizations to improve access to quality care

At the Facility in an equipped hospital

- Ensure high-quality, respectful maternal and newborn care during labor and delivery
- Provide life-saving care for mothers with complications and small and sick newborns
- Treat pneumonia, severe diarrhea and acute malnutrition
- Improve clinical practices for sanitation and hygiene

At the National Level in the capital or boardroom

- Support government programs to train, supply and supervise health workers
- Support sound immunization policy, strategies and guidelines to ensure greater country ownership of routine programs
- Engage local and international NGOs in polio eradication activities, with a focus on surveillance and outbreak response in hard-to-reach populations

Globally joined by health leaders

- Encourage policies that reflect best practices for maternal, newborn and child health
- Support the accelerated introduction of new and underused vaccines through investing in Gavi, the Global Vaccine Alliance
- Diversify funding for women's and children's health through collaboration with donors and the private sector
- Apply research and innovation to maximize the impacts of health investments
